

Join Our Webinar Series

Biomethane as a Transportation Fuel

Hosted by Western Washington Clean Cities and the Washington State University Energy Program

While renewable energy enthusiasts consider combustion of biogas from landfills or digesters a great source of renewable electricity, the use of that gas as a transportation fuel has not traditionally received the same level of consideration. This webinar series will explore the incredible financial opportunities and significant environmental benefits of using biomethane (or renewable natural gas) as a transportation fuel. Join our national and local experts to discover what factors impact project success, including key economic drivers and incentives available to support such projects.

PART 1: Biomethane Technologies – Costs and Benefits for Transportation

Featuring **Marianne Mintz**, Argonne National Laboratory and
Jim Wegrzyn, Brookhaven National Laboratory

Monday, November 28th 10:00 am PST (1:00 pm EST)

Register for Part 1: <https://www1.gotomeeting.com/register/659863616>

PART 2: Biomethane: Transportation Experience and Opportunities in Washington State

Featuring **Frank Mazenec**, Biofuels Energy, LLC, (LRI Landfill) and
Scott DeWees, Western Washington Clean Cities Coalition

Tuesday, November 29th 10:00 am PST (1:00 pm EST)

Register for Part 2: <https://www1.gotomeeting.com/register/406345800>

Who Should Participate:

Clean Cities Coalitions • Fleet Managers • Landfill Operators/Developers
Wastewater Treatment Plants • Waste Digester Operators/Developers • Livestock Industries
Clean Energy Advocates • Alternative Fuel Providers
Renewable Energy Policy Analysts • Automotive Industry
